Continuation of 5. does NOT place the application in condition for allowance because: Applicant contends that, although Isoyama teaches particle diamters from 1-20 mircons and a heating temperature from 300 to 1200 degrees, the reference does not specifically teach a particle diameter from 0.05 to 10 microns or a mixting temperature of 600 to 900 degrees. This argument is not persuasive. According to MPEP 2131.03, a specific example in the prior art which is within a claimed range anticipates the range. In the instant case, Isoyama expemplifies an active material with a 0.3 micron particle diameter and heating temperature of 900 degrees (See Example 1). Therefore, Isoyama anticipates the instant claims.
